

## LED ATTACHMENT

### LIGHT IT UP.

The Club Cannon LED Attachment is the first of its kind, using 6 in 1 LEDs, allowing you to light up the CO2 output any color, including UV! It was designed to attach to the Club Cannon DMX Jet quickly and easily, with magnets.

Having the LED Attachment as a separate fixture, will allow you to have a modular setup. Customers with non-LED CO2 Jets, can now add the LED function easily, without having to replace any equipment. Certain events may request LEDs, others may not. This makes the LED Attachment an easy solution for any circumstance.

The LED Attachment has 8, 12w LEDs, each capable of producing Red, Green, Blue, White, Amber and Ultra Violet. (6 in 1)

To attach, simply slide the LED Attachment over the barrel of your CO2 Jet, and the magnets will automatically bond to the body of the CO2 Jet. When using the CO2 Jet and LED Attachment inverted, or hung from trussing, we recommend using a safety cable, which can be easily attached to the supplied Eye Bolt, which has a threaded inlet on both sides of the LED Attachment, making it convenient for almost any setup.

The included sponge will rest between the body of the LED Attachment, and the output barrel of the CO2 Jet. The sponge will absorb condensation created during use.

To link the power and DMX signal from your CO2 Jet, the LED Attachment includes short jumper cables, which can be fed from the back of the CO2 Jet, straight into the back of the LED Attachment. No need to run additional power or DMX lines.

Although the LED Attachment was designed for use with the Club Cannon Co2 Jet, it is also suitable for other CO2 Jets on the market as well. The barrel opening is 3" wide, making it compatible with a number of products.

### FEATURES:

- Attaches Magnetically
- 8, 12w 6 in 1 LEDs
- Universal Power Input (85-264v AC)
- 3 pin AND 5 pin DMX in/out
- 4 DMX Modes (2 CH, 5 CH, 8 CH, 9 CH)
